

USEcology

Transportation

US Ecology is a national leader in the safe, efficient transportation of hazardous and radioactive materials. Both our Idaho and Texas facilities are rail-served, handling over a half-million tons of hazardous and radioactive waste a year.

With our large fleet of gondola and hopper cars, US Ecology handles large cleanups quickly and cost-effectively.

Onsite Services

We provide a full range of onsite loading, packaging, manifesting and transportation services.

- 1 indoor, emission controlled railcar unloading
- 2 hopper, gondola, and intermodal capabilities
- 3 barge transport for distant customers

Transportation

Safety – Protecting people and the environment is US Ecology’s top priority. Our excellent safety and regulatory compliance record minimizes liability and provides customers with peace of mind.

Volume Experience – Our experience handling large volumes is one reason we were awarded a one million ton + rail transport, treatment and disposal project.

Timely – Time is money. Our team can manage all transport operations to maximize throughput and minimize demurrage charges.

Hassle Free – Large debris?
Boulders? Pipe and demolition waste?
Large components? No problem!
